

# International Amateur Radio Union Region 1 Interim Meeting – Vienna Austria 27-28 April 2019

**Document number:** VIE19 C4-006

**Source:** Egbert Hertsen – ON4CAS – UBA HF Manager

**Subject:** FT8 & JS8CALL on 160m

**Committee(s):** C4

**Summary:** only if the proposal is more than one page

**Text:**

Presently, FT8 and JS8CALL are to be found on 1.840 resp. 1.842 on 160m. Currently, Belgian HAMs are allowed to use 1.5 kW from 1.800 to 1.850 on 160m. It is our understanding this high power segment applies to several other IARU Region 1 countries.

**Proposal:**

Considering that both FT8 and JS8CALL should be considered low power modes it might be useful to reconsider the FT8 and JS8CALL preferred frequencies.

**Financial Implications:** none
